4 stories

## PRODUCTS USED:

ConCore 1250  
Underfloor Air System  
Modular Wiring  
HPL & Modular Carpet

LEED CERTIFIED

## Subject

### ELECTRONIC ARTS

Electronic Arts (EA) is the world's leading independent developer and publisher of interactive entertainment software for advanced entertainment systems. This four-story, 300,000 sf office building with raised access floors allows Electronic Arts maximum flexibility of open office space for the changing teams within the video game company. Interior construction includes a full-service cafeteria, game rooms, administrative space, conference rooms with top of the line equipment, and child care center. The design called for installation of unique materials and upscale finishes throughout the entire facility. This space is unbelievable!

*"All power/data in the building is distributed beneath a raised floor, utilizing a modular "plug & play" system with floor mounted outlets for both systems. This allows space to be reconfigured quickly and cost effectively. Additionally, the use of an underfloor distribution system on the project allows air to be delivered between the structural slab and the floor which gives individuals more control for greater comfort, provides more efficient cooling, and allows for a more flexible use of space."
